SUMMARY

Results-driven Full Stack Developer with proven experience in designing, developing, and maintaining scalable web applications. Skilled in both frontend and backend technologies, including modern frameworks, databases, and cloud services. Passionate about writing clean, efficient code, optimizing performance, and delivering high-quality software solutions through a collaborative and problem-solving approach.

SKILLS

Frontend: HTML, CSS, Bootstrap, JavaScript, Angular, Vue.js, Vanilla.js
Backend: Node.js(typescript), Express.js, Socket.io, REST APIs
Databases: MongoDB, MySQL
DevOps & Cloud: AWS EC2, S3, Nginx (Reverse Proxies & Load Balancer), Grafana (Loki)
Tools: Git, Postman, VS Code, Antigravity

EXPERIENCE

Software Engineer

Jupitice Justice Technologies **May 2025 - April 2026, Chandigarh**

- **RERA (Real Estate Regulatory System)**: Designed and built a blueprint-based filing system where admins can configure dynamic forms, validations, and workflow rules. Developed modular backend APIs with field mapping, conditional logic, and role-based access control. Implemented a dashboard "table builder" with case creation, auto-filled fields, and multi-step filing features.
- **Artemis (Company's Core Justice Product):** Implemented logical automation in the Consequences Engine, including trigger-based workflows and schedule-based actions (cron jobs). Integrated SmartODR-based payloads with multiple dynamic fields, conditional logic, and layered validations. Added Grafana logs with Loki agent to debug the functionality in server.
- **Haryana Revenue Court (External API Integration):** Developed the complete data ingestion module for the Haryana Revenue Court using secure API communication. Implemented filtering, pagination, sorting, and real-time list refresh functionality
- **High Court:** Developed a bundle management module for a High Court project to handle multiple PDF files efficiently. Implemented features to generate dynamic indexes within each file, merge documents into a single bundle, and automatically create a master index page with consistent page numbering for better organization and navigation.

Full Stack Developer

WisewayTec **April 2024 - January 2025, Mohali**

- **EvolveAir – Online Education Platform**: Implemented course creation tools, multi-video uploads with compression, and secure signed video URLs. Built a payment module with Stripe → Razorpay migration, including webhook-based payment confirmation and refund handling. Applied dynamic routing, reusable components, and state management in Vue.js.
- **GDCC Exchange** – Crypto Exchange Platform: Developed admin panel features for custom coin creation, coin listing, and Binance integration. Integrated real-time price charts using TradingView widgets. Implemented secure Two-Factor Authentication (Email and Authenticator App). Built real-time buy/sell updates, order execution, price tickers, and market pair updates using Socket.io.
- **Pantrade** – Automated Trading Bot: Implemented market analysis modules, signal detection, and decision-making logic for automated trading. Built automated buy/sell workflows through exchange API integrations. Secured wallet balance handling, fund transfers, and deposit/withdrawal APIs.
- **Crash Game** – Real-Time Multiplayer Game: Developed a random crash multiplier algorithm with a fairness engine mechanisms. Implemented WebSocket-based real-time events including live player joins, bet placements, and instant crash results. Built game state synchronization, session management, and leaderboard modules. Optimized backend systems to handle high concurrency and real-time load.

MEAN Stack Developer

Relinns Technologies **March 2022 - April 2024, Mohali**

- **BotPenguin** – AI Chatbot Builder: Developed multiple end-to-end modules for the chatbot platform using Angular and Node.js. Integrated Google Contacts, Zendesk, Close CRM, and Freshworks to automate lead generation. Implemented OAuth login with

Google, token refresh handling, and secure authentication.

- **Caterpillar (Deloitte Client Project):** Built enterprise Angular modules with reusable architecture, advanced filters, dashboards, and secure APIs. Worked with MEAN stack following strict coding standards and documentation practices.
- **Authentic Drilling – US Client:** Led complete development of both Admin Frontend (Angular) and Admin + Mobile Backend APIs (Node.js), delivering a fully functional end-to-end solution. Designed and developed REST APIs used by both admin dashboards and mobile applications, ensuring consistent data flow and high performance. Built a comprehensive Scheduling Module to manage thousands of employees, including shift planning, leave tracking, employee replacement, cost calculations, and equipment allocation. Implemented automated email notifications, reminders, and workflow triggers for job activities.

EDUCATION

Master of Computer application (MCA)

Himachal Pradesh Technical University • Hamirpur • 2022 • 8.1 GPA

- Awarded Gold Medal in MCA from Himachal Pradesh Technical University

Bachelor of Computer Science (BCA)

Govt. P.G. College Dhaliara, Kangra • Himachal Pradesh • 2019 • 8.38 GPA

- Awarded Second Position in BCA from Himachal Pradesh University
